Show arithmetic: (a) is "up 30% YoY" true?

Yes YoY is 30% on the Number of Total Sessions.

Total Sessions real arithmetic is after comparing last month with first month
$$=(75200-57500)*100/57500 = 30\%$$

Total Sessions fake arithmetic was 78.7%.

It is to note that readers increase is 39%, 1140 finally from 820 initially.

(b) your best estimate of underlying change?

Best estimate of underlying change is increase in sessions per month, as it is the sessions which are monetized.

This is because the scale and ads/session makes a larger revenue than a small number of subscription based earnings from subscribers, if any.

(c) Retire guides, yes or no?

Yes, guides must be retired. It went from 4100 in Sept 2025 to 3000 in August 2026. Its performance is consistently downwards.

analysis.xlsx/.ipynb/.py, formulas or code intact; up to two charts; memo.md or .pdf,

Notes Check:

A second AI writer joined Sep 2025 - Data not available, not useful info

A crypto explainer hit a big aggregator's front page for 36h in Nov 2025 - True most likely, as crypto has a spike in a one-off spike.

the analytics snippet was swapped site-wide on 1 Feb 2026, unchecked since - Likely cause of fake data post Feb 2026.

Guides has published almost nothing since Mar 2026 - Wrong. Task 1 shows last article in May 2026.

ads pay per session, near zero on Guides - Data not available. One more reason to retire guides.

newsletter slots price on subscribers. Check the notes against your rows; flag any the site contradicts

This is session Trend including Fake Data. Roughly 1.41 to 1.49 factor has been applied on all 6 sessions since January, and its increments afterwards. The reason could be a lenient definition of session, or a new analytics tool employed. It is visible still that November 2025 is a on-off on Crypto due to its spike.

Newsletter’s increase is steady 30 readers per month, how could suddenly in February 2026, all the readers started to increase with 1.41 to 1.49 factor in all 6 subsection without an subsequent rate of increase in number of readers. And specially, the ever so decreasing guides even started to increase, therefore all data after February 2026 is fake, and is scaled due to measurement change, measurement error, or measurement leniency. *the analytics snippet was swapped site-wide on 1 Feb 2026* could be a reason!

This is Session trend: real vs fake

700 words max:

A, two findings from your rows with numbers;

1. Crypto has a spike in 11-2025. It's a one-off. 75000 sessions in November. Additionally guides fell from
2. Real growth, assuming linearity, is 30% in sessions, and not 79% as it was in fake data.

B. where Part 1 and the table meet;

- Crypto's spike could be attributed to the following news in Sept 2025

Bitcoin Price Briefly Tops \$84,000 as Short Squeeze Accelerates
published in Crypto Subsection. This is a sign that Crypto sessions
are correlated with Bitcoin news.

- Last guides article was in May 2026, not in March 2026 as the notice information says "Guides has published almost nothing since Mar 2026"

C: a recommendation and its cost if wrong;

- Increase AI-related news in markets to increase its share in the sessions.
- If I am wrong, standard market news would be overlooked from other sectors such as Quantum, Telecom etc.

D: a line beginning "I would change my mind if...";

I would change my mind if the cost of subscription was much higher than ads/sessions like 1000x or similar. Then subscription would matter more as a measure of change than sessions count.

E. the next number you want, free to get. Keep real and invented data separate.

I want to know subscription and ads/session cost and ads rate per a session.

Newsletter signups per section by month is another number that will help if available.

F. Honest Disclaimer:

I assumed that growth will be linear, with same number of increase in sessions after February 2026 as before it. +700 for AI, + 300 for breakthrough, -100 for guides and +100 for policy and so on

G. Uncertainty.

There might be non linear growth after February in the number of sessions!
